Morgan is chief engineer and Charles H. Paul assistant chief engineer. It was described in the Miami Conservancy Bulletin for October, from which the accompanying illustrations are reprinted. Sand Filters for Small Sewage Plants By W. A. Hardenbergh When suitable; construction requirements of several state health boards. In a recent issue the disposal of the effluent from residential and other small sewage treatment plants by means of sub-surface irrigation was discussed at some length, and the recommendations of various state boards of health were given. Under certain conditions this method of treatment is best suited for residence and small community use. These conditions include a well-laid distribution area and a porous soil. The latter, unfortunately, cannot always be secured, and costly substitutes must be found. Also, in the case of institutions using fairly large quantities of water, a considerable area is required. Finally, the effluent is applied to the soil in the manner best suited to cause pollution of ground water. Intermittent sand filtration yields very good final effluent; but considerable care is necessary for proper operation. Where this care can be secured, the small sand filter will prove most satisfactory. The only local necessity is sufficient fall to allow the filter to operate. With the ordinary septic tank, siphon and sand filter, about 5 feet of fall is usually needed. The presence of local sand supplies will reduce the cost. The Illinois State Board of Health does not recommend the...
